

Pax oil-filled radiators

More value for your money

The choice of quality radiators have become easier

Now we are launching an updated range of energy efficient Pax radiators. We have merged all unique features from the popular series Pax 3000 Standard with the energy-saving temperature automatics from Pax 3000 Luxury.

- Easier for you to choose.
- More value for your money

Comfort and saving temperature

Pax oil-filled radiators have a smart energy-saving function. With simple clicks, you can switch between a normal set comfort temperature and a 4°C lower setback.

There are three different time intervals to choose from. You make the setting at one point, this is then repeated until you decide to change or remove your selected time intervals.

Thanks to the control intelligence built into the thermostat assembly, you can adapt the temperature individually for each room.

Energy efficient

Exploiting the temperature reduction function in a normal insulated house is very energy efficient. Each degree drop around 20°C, involves about 3-5 percent reduction in heating costs, during the time when the function is active.

Unique features

- Discretely located electronic thermostat with precise control.
- Automatic switching (4°C) between comfort and saving temperature, with repeating timer.
- Frost protection temperature 7°C.
- Low-temperature version surface max 60°C (selectable function).
- Max temperature limitation max 23°C in the room (selectable function).
- Prepared for GSM-control (mobile app)
- Made in Sweden.
- 5 year warranty.

Technical specifications

Oil-filled electrical radiators

Class I (must be protectively earthed) **IP24**  

230V AC 50Hz

Accessory

Item. no.	Description	Material	Weight		EAN code	E-no.	RSK no.
			kg				
6282-0	Touch guard for thermostat	Plastic	0,05		7391477628204	8557820	8758334

Included in the delivery

Wall consoles
Wall box for electrical connection
User- and installation manual

Temperature automatics

Selectable time intervals:
5 h / 5 days, 7 h / 7 days or 12 h / 7 days

Heating need

Thumb rule: The heating need can be calculated to 60-70 W/m² or 25-30 W/m³.
